

Electric strikes BIRA ELP-series for wooden fire-resistant doors with classification EI30. Certified according to Resolution CPR 305/2011 and the EU harmonized standard for electric strikes 14846.

ELP-series feature steel latch without adjustment and asymmetric housing. Applied in left and right doors.

Characteristic:

- For wooden fire-resistant doors (classification EI30) certified according to 14846
- fail-secure (NC normally closed) or fail-safe (NO normally open)
- size: width 20mm, height 90mm, depth 27,5mm, size of version with door status monitoring: width 20mm x height 97mm x depth 28mm
- mechanical strength - break-in resistance class 2
- mechanical strength - opening cycles 200.000
- DIN-left and DIN-right doors

Models in HARTTE ELP line:

- normally closed
- normally open (mounting on additional lock)
- normally closed for continuous working

Above models available with door status monitoring (M) and/or varistor (V)

Electric specification

[Wyjaśnienie funkcji](#)

Matching mounting elements

Flat plates

- made out of different materials: stainless steel, standard steel, anodized aluminum
- polished, plated, galvanized or painted

Angle plates

- made out of steel or stainless steel
- plated, galvanized or painted

Boxes

- made out of steel
- galvanized or painted
- front or side mounting

Special plates with latch bolt guide securing profile

- made out of steel or stainless steel
- plated, galvanized or painted
- Wykonane ze stali nierdzewnej lub zwykłej ocynkowanej, niklowanej lub lakierowanej

Blachy do wmurowania

Wykonane ze stali zwykłej ocynkowanej, montowane w furtkach

Mounting brackets for order

- striking plates adapted to customer needs
